

CENTRIFUGAL BRONZE

Fonderia F.lli Pagliotti s.r.l. has been one of the first foundry in Italy that installed the centrifugal machines. The company has been known for its over 40 years experience in the production of PIPE BRONZE achieved by the method of CENTRIFUGAL CASTING. This type of casting allows us to supply tubes and rings of large diameters. [more ..]

[CONTINUOUS CAST BRONZE](#)

The bars of bronze obtained by continuous casting has a remarkable consistency from the periphery to the heart, with a consistency of mechanical properties and excellent mechanical processability. The additional opportunity to be rolled makes this type of bar suitable for use on automatic machines. [more ..]
